Career Planning Worksheet

Please complete this career planning worksheet and submit it ahead of your career coaching call. Your coach will review ahead of time, and use this as a frame of reference for coaching around your career goals.

Upskiller or Reskiller? *Review the information in your unit for a reminder on these definitions.*	☑ Upskiller ☐ Reskiller
My career change includes: *Check off what type of change you are making. Check all that apply.*	☑ Industry ☐ Role ☐ Company
Current Career + Next Steps *Current job, including what you do in your role specifically? Why are you wanting to leave this role / career? Why did you decide on this course?*	Long-term Unemployed but currently searching for positions
Transferable Skills *Make note of any transferable skills you have acquired in your current, and previous experiences that will benefit you in your new career.*	SQL, R, Python, Microsoft Word
Relevant Experience *Name some of your past experience that is related to your new career goals including how many years experience*	-Volunteer with the Data Science club -personal projects (Working on in course) -theoretical domain knowledge
Job Search Locations *What city or cities are you pursuing new opportunities in? Job Guarantee participants are required to search in eligible cities.*	Minneapolis, Minnesota but am flexible
Values, Passions, Interests *What values, passions, interests are you hoping to incorporate into your career goals? Ex: I am passionate about climate change and want to use my new skills for a job in sustainability and climate.*	Have a broad range of interests but especially interested in computational social science applications, about public knowledge + cultural shifts and informational production processes

Job Titles to Pursue *Based on what you have learned so far, what job titles seem like they could be a good fit for you? List them here. Use the activity in this unit to get to these titles.*	Data Scientist, Python Engineer
Industries to Pursue *Based on what you've said so far, what are some industries you're going to pursue jobs in? Remember, tech jobs are available beyond the tech industry.*	Tech, Academia, Goverment/public jobs, Think tanks?
Salary & Benefits *What are your salary and benefits expectations? What is the minimum you're seeking, what benefits are important to you?*	Am flexible but 80000$+ would be optimal, I also am concerned
Motivation *What is your source of motivation for pursuing this course and career change? What are you going to reflect on when things are hard so you don't give up?*	I am motivated to find employment as have been out of work for extended duration after college -Information accessibility and justice projects? How to improve access and vocality of marginalized groups within technological production and data analysis (beyond just scanning for bias, how to ask different questions? Different methodologies? Different sites to examine?)-- also motivated by wanting social impact
Capstone & Project Ideas *Considering everything you've stated so far about your values, passions, interests, job titles, industries, etc. what are some ideas you have for your capstone and projects in this course?* *Ex: Designing an app that monitors household water usage. Developing an algorithm that identifies early stages of neurodiversity that can be applied to a monitoring product.*	-Studying the ways social organizations produce, critique and use knowledge and how they are impacted by public discourses -Studying cultural changes and how they are mediated by social, political, economic, and technological forces -Scanning for information accessibility and vocality?
